REBEL POETRY. JACKSON IS DEAD.

The following poem, appearing in the New York Daily News, if we lay aside its treasonable tone and adulation of a Rebel, is one of the most pleasing set of verses that has fallen under our notice for a long time. It is almost perfect in rhythm, and breathes the fire of true poetry. To our readers who can endure its sentime ts because of its literary excellence, we wo ld commend its perusal.

Jackson is dead! and the tears of a nation Rise with the prayers of the millions that pray, Jackson is dead! and the sad revelation Lifts the sweet incense from alters to day. Liberty bent o'er her champion sleeping, And sbricked as the conqueror fied from the

His country beside his still coffin is weeping-Tear-drops of blood from the land of his birth. Jackson is dead! weep, matron and maiden, For him who his life for your safety did spend Weep o'er the urn with his honored dust laden. The hero, the husband, the father, and triend. Weep, for his arm was wielded to save you From insult and outrage, from ruin and

Weep, for his life he willingly gave you,

A stranger to fortune, a spurner of fame. Jackson is dead! and the camp is in mourning, Its veterans honored by many a scar; And warriors who, lite and suffering scorning, Ha e breasted the angry tornado of war, Bow down their heads when they hear his name

spoken, And weep scalding tears for the hero they love, And kneeling they pray that the spirit, now

May kindle its flame-the hero's above. Jackson is dead! Bear softly his ashes, And lay them to rest near Mount Vernon's green vale.

He hears not the cannon, he heeds not their For Washington greets him a happy "All Together they sleep, proud rivals in glory, No longer they toil where the wild carnage

raves; But history gilds the bright laurel of story To beam with new lustre above the twin

Jackson is dead! Disturb not his slumber, But smooth the soft pillow that raises his head; While living he spurned the foul foe without

Let not their pollution disturb him when Then, soldiers, come swear, and the oath as you word it, Let angels record with their pens from on

bugh. Swear by your swords, and God shall record it, Swear to avenge him, or by him to die!

Jackson is dead! place the sod on his bosom, The wreath of his glory let history twine; For his grave shall be sought by the pilgrims of freedom. The Mecca of nations, his proud country's

shrine. Then, youth, maid, and matron, and grandsires hoary, Kneel by his grave, 'tis blessed and free; Great in his goodness, and good in his glory, The spot where he sleeps must be sacred to

Jackson is dead! and the angels in heaven Gather to welcome his soul from the sod, And strewing his path with celestial flowers, They lead him with songs to the presence of

God; And blushing he takes the bright crown with the greeting He hears in the voice of Jehovah alone-Then beaven applauds, and the angels repeating The sentence eternal: "Good servant, well

NOTES ON SCIENCE.

PHOTO-LITHOGRAPHY.

Mr. J. V. Osborne has invented a method by which a photograph in lithographic ink adapted for transference to stone by the usual lithographic operation, ready for printing in the ord nary way, can be executed in the course of a few hours. The process is not adapted to portraits or views taken from nature, but it is in-tended to reproduce, by the chemical agency of light, a perfect fac-simile of maps, plans, pen-and-ink drawings, printed documents and en-gravings. It is confined to black and white drawing, and cannot render half tones, shading, indis-ink drawings or paintings. Its range is, however, nearly as great as is required for lithographic work. The process consists in taking a very tine and sharp negative of any given map or drawing. The positive from this is printed in the usual way, upon paper sensitized with bichromate of potash, gelatine, and albumen. The bichromate, in the presence of organic matter, undergoes a physical change in the light, and is easily adapted to receiving the transfer ink. The sun does the copying, and thus secures a perfect reproduction of the ori-ginal. It makes no difference to the pencil of ight whether it has to copy a simple or a complicated drawing—both are snished in the same time; but the lithographer would require a week longer for one picture than for another. By Mr. Osborne's process a piece of work sent into the office in the morning can be lithographed and printed in the afternoon. If the inventor can produce all that is claimed for the process—and there seems to be no good reason for doubting the evidence on the subject-it will be a valua ble contribution to the publisher of illustrated books, and to the topographical bareau of the Government. It ought to be thoroughly tried. A graphotype process has also been recently introduced. It is entirely different from the

above. Very fine and pure French chalk is sitted upon a zinc plate and subjected to the great force of a hydraulic press. The artificial stone is then properly prepared, and the picture drawn upon it with peculiar pencils, and the sunken portions removed by brushes. The chalk is then hardened by being soaked in liquid quartz, and a copy taken with type-metal, ac cording to the usual stereotype process. The metallic copy can be furnished three hours after the completion of the drawing upon the chalk. It is claimed for this method that the expense of lithographic stones is avoided, and that a durable stereotype is obtained; whereas, in lithography, the drawing must be removed before a new picture can be begun. A combina tion of photography with this method would seem to offer great advantages in the reproduction of all black and white work.

AN AUTOGRAPHIC TELEGRAPHIC APPARATUS. The apparatus invented by Caselli produces autographically telegraphic despatches. now in operation between Paris and Lyons, and will be extended to Marseilles. The same apparatus can be used for repeating designs. RECOVERY OF PURE SILVER PROM PHOTOGRAPH

BESIDUES. Dr. Van Monckhoven has published a method first proposed by M. Stas:1. From old baths-Filter, add ammonia until the precipitate is redissolved, and then saturate with sulpaurous acid gas or add sulphite of ammonia. Heat the liquor to about 104 deg.

Fahrenheit or about an hour, when all the silver will be precipitated. This silver, after thorough washing, will be pure enough to be dissolved in atric acid in the preparation of utrate. 2. From washing-The washing may be col-

lected in a barrelin which a sheet of copper is placed. The silve will be precipitated in about twenty-four hours This can be dissolved in nitric acid and treacd with ammonia, and sulphite of ammonia tr sulphurous acid gas, as

above.

3. From paper—But the papers one by one, so as to get a white at. Weigh the ashes, and treat them with an equal weight of nitric acid diluted with twice its blume of water. All of the silver will be disolved. It can be prespitated by sheet copier and recovered as above.

4. From chloride of silver-This may be at once dissolved in ammenta and heated with the sulphite. The method is not approable to old hyposulphite.

PREHISTORIC REMAINS. The Pall Mall Gazette says that much interest was excited last year by the discovery of human bones, flint implements, etc., by Mr. Laing, in mounds at Caithness. The learned interpretations of Professor Huxley and Professor Owen were sought and obtained. The peculiar construction of the mounds was elaborately de-scribed by Mr. Laing; the adult skeleton was pronounced to have spe-like peculiarities, and the jawbone of an infant which was submitted to Professor Owen was said to have certain marks which were painfully indicative of the cannibalistic habits of our prehistoric progenitors. The Ethnological and Anthropological Societies had rival discussions, and a great deal of erudite dissertation and debate took place, which is preserved in print.

The present status of this matter is now

stated as follows:—
At the last meeting of the former society, it was broadly stated, by several persons who have since examined these mounds, that not any of them contain any traces of prehistoric age. The harbor mound is composed almost entirely of limpets; the churchyard mound of periwinkle shells! The harbor mound contained a pair of weaver's shears, and was itself the ruins of a common corn-kiln of the country. The stone implements were said to be chips such as may be collected by the barrowful. The Birkle Hills, nstead of being places of worship and sacrifice, were thought to be natural hillocks of blown and, which had served as the rendezvous of country folks on occasion of wrecks. The ape Danish scaman; and the jawbone of a child, which afforced indications of cannibalism, to have been torrowed from a neighboring churenyard. Come are said to have been found among these "prehistorie" remains, belonging, not to the age of the great auk, but to the reign of William III. The controversy on the authenticity of the Abbeville jawbone will probably fade before the battle over these mounds at Keiss.

OZONE. M. Soret has determined that the density of ozone is one and a half times greater than that of oxygen. Dr. Boeckel, of Strasburg, has shown from observations conducted during a period of eleven years:—

1. That there is more ozone in the spring of the

That May is the richest month. 3. That October and Aovember are the poorest.

4 That there is less ozone at night than during the lay.

6. That certain years were rich in czone—1852,

6. That the barometric variations, morning and evening coincided with the variations in the quantties of ozone. ARTIFICIAL MEERSCHAUM. One hundred parts, by weight, of concentrated of magnesia and eighty parts of carbonate of magnesia and eighty parts of finely pulverized meerschaum are ground together and bolted. The powder is then stirred into a paste in water, and left about ten minutes, and east

into a mould. Any shade of color could be mixed in with the powder, and thus the heavy labor of coloring a meerschaum piee be spared to many a youthful smoker. It is said that genuine meerschaum will float for some time on water; but the above mixture would be likely to sink at once. MANUPACTURE OF SOAP. The manufacture of soap and of oils is the

chief industry of Marseilles. There are sixty-two large establishments. The annual con-

Oil......400,000,000 "

GEOGRAPHY. At a meeting of the Royal Geographical Society in London, on the 23d of April, Sir Roderick Murchison announced that more favorable accounts had now been received of the expedition which had been sent into the interior of Australia, under the leadership of Mr. McIntyre, in search of remains of Dr. Leichhardt's party. The search expedition had suffered much through the severe drought of the past year, and had lost all its horses in the neighborhood of Cooper's creck; but the camels were preserved. and the losses had not prevented the party from continuing its march towards the northwest.

FACETIÆ.

-Little three year old Senie was playing very roughly with her kitten—carrying it by the tail. Her mother told her that she would hurt pussy. "Why, no I won't," said she, "I'm carrying her by the handle."

-Do one thing at a time-that's a rule. When you have done slandering your neighbor, begin and say your prayers. -When was becfsteak the highest? When

the cow jumped over the moon. -Which runs the faster, heat or cold? Heat, because you can catch cold.

-Why were the Egyptians good sons? Because they paid great respect to their mummies. -Why are persons born blind unfit to be carpenters? Because they never saw. -Why is a lover like a dog? Because he bows and wows.

PROPOSALS.

GOVERNMENT SALE OF THE MILITARY TEXAS. QUARTERMASTER-GENERAL'S OFFICE.

QUARTERMASTER-GENERAL'S OFFICE.

WASHINGTON. D. U., April 19, 1866;

The attention of capitalists seeking a profitable investment is invited to this sale.

Seekind Proposals will be received at the office of the Quartermaster General (Division of Enver and Rail Transportation), at WASHINGTON, D. C., until the first day of June next, at 12 o'clock M, for the purchase of all the right, it e, and inferest of the United States in and to the United States Military Railroad from Brazos Saninago to White's Ranche, Texas.

Ranche, Texas.

The sale will include the entire track and sidings, buildings, water stations, turn-tables bridges, etc. the railroad materials and supplies perfaming to the road, together with the rolling stock, cars,

to the road, together with the rolling stock, cars, machinery, and other equipment.

The sale will not inclinde the title to the land, which coes not become to the Unitee States.

This road is about ten miles in length, and extends from Brazos Santago to White's Ranche, on the Rio Grance From this point connection is made by steamer with Brownsville and Matamoras.

This route is the shortest and best for the immense traffic between the Gulf of Mexico and the interior of Southern Texas and Northern Mexico, and the communication by rail alone can readily be extended to Brownsville.

The road already completed saves thirty miles of difficult and tortuous navigation. Boats on the river now charge, it is stated, for freight to Brownsville, as high as \$6 per barrel, and for passengers \$15 each.

The road is five-leet guage, good ties, T rail, and full-spiked.

More particular description of the property can be obtained at this office, or at that of the Chief Quartermaster Military Division of the Gulf, at New Orleans.

Orleans.
